

Table of Exhibits

1-1. Framework for Examining Transportation and Potential Global Climate Change	3
2-1. Global Natural and Anthropogenic Sources and Absorption of Greenhouse Gases.....	5
2-2. US Carbon Emissions as a Percent of World Emissions	6
2-3. US Emissions of Greenhouse Gases, Based on Global Warming Potential, 1988-1995	7
2-4. US Carbon Dioxide Emissions from Fossil Fuels in 1995.....	7
2-5. US Carbon Dioxide Emissions from Transportation Sector, 1984-1995.....	8
2-6. Estimated US Carbon Emissions from Mobile Sources, 1995	9
2-7. Percent Increase in Atmospheric Concentrations, 1880-1992	10
2-8. Estimated Global Concentration of Greenhouse Gases, 1880 and 1992.....	11
2-9. Global Warming Potentials.....	11
4-1. Milestones in Global Climate Policy	23
4-2. CCAP Greenhouse Gas Emissions Estimates.....	24
5-1. Strategy Approaches	30
5-2. Strategies to Reduce Greenhouse Gas Emissions from Motor Vehicles.....	31
5-3. Comparative Energy Consumption of Autos and Transit	40
5-4. Fuel Consumption Rebound Effect	59
5-5. Energy Consumption by Gasoline-Powered Vehicles.....	64
5-6. Fuel Economy Improvement Potential of Conventional Vehicle Technologies	67
5-7. Estimated Potential for Fuel Economy Improvements.....	68
5-8. DOE's Estimated Fuel Cycle Carbon Dioxide Emissions per Vehicle Mile Traveled	79
5-9. Mandates for Percent of State Vehicle Purchases that Must be AFVs under DOE Rule.....	81
5-10. Summary of Strategies and their Characteristics	87
